

Simplifying specialty medication access

Electronic Benefit Investigations

The entire authorization process begins with the BV. eBlu Solutions allows HCP's to run a complete and accurate BV in real-time. 85% are returned instantly.

Electronic Prior Authorization

No more phone calls, faxing or spreadsheets. HCP's reduce errors and omissions leading to faster PA approvals - the first time.

Co-pay Enrollment

We close the loop for patients with pre-populated manufacturer savings forms, capture patient consent and transmit directly to the brand's HUB.

Specialty healthcare practices encounter challenges in starting patient treatments

Delays in prior authorization and insurance verification, often due to incomplete patient information, can postpone therapy. High out-of-pocket costs and limited financial aid complicate matters, especially for costly specialty medications. Fragmented coordination among providers and pharmacies can cause communication issues, risking treatment lapses and extending patient wait times.

For over a decade, we have worked directly with specialty healthcare practices to provide the software solution they need to get patients to treatment faster. We're changing the way patients get on - *and stay on* - treatment.
